

The logo for SVS FEM features the text "SVS FEM" in a bold, black, sans-serif font. The text is centered within a yellow rectangular bar that has a slight gradient and a thin black border. Below the yellow bar is a solid black horizontal line.

SVS FEM

Extend Selection

The background of the slide is white with a repeating pattern of light gray, tilted rectangular outlines that create a textured, grid-like effect.

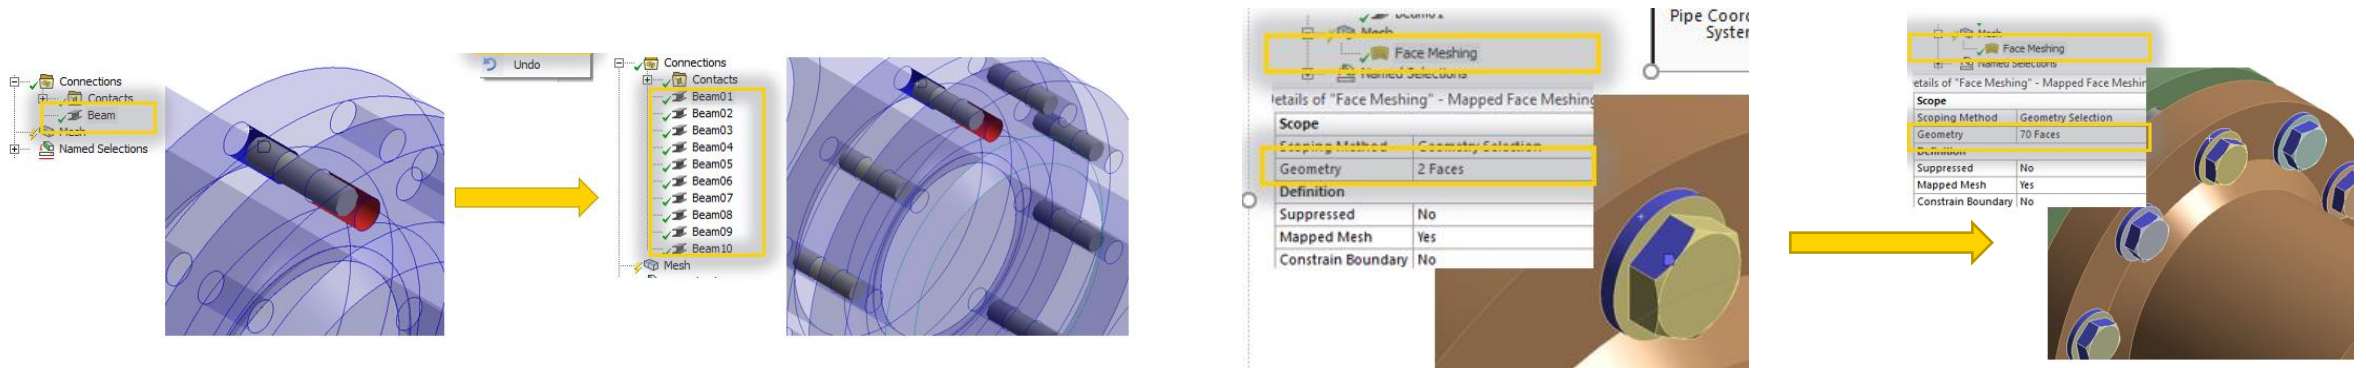

Your partner in computing

Description

Modul: Mechanical

This ACT extension provides efficient way how to select geometry entities based on its parameters like body, name, size, location, ... at the same time. This tool allows to:

- Extend Selection in graphical window
- Extend Location of certain object
- Duplicate Object

It extends standard mechanical selection functionalities which can use only one parameter (size, location, ...) and only one seed entity (face, edge, ...) at time.

Workflow

1. Select appropriate Coordinate System (CS)
2. Use one of the following extend functions
 - Extend Selection
 - Extend Location
 - Duplicate Object
3. Undo the action if needed
4. Modify extend settings if needed

Notes:

Seed entities:

- Extend Selection → vertex, edge, face, body
- Extend Location → tree object

More than one seed entity can be selected for each functions. Each seed entity will be extended separately.

Undo action is supported only for tree objects which were created via this tool in current Mechanical session.

Controls

Select CS

Select appropriate Coordinate System (CS).

X axis of the CS defines axial direction of selection pattern.

Name of the selected CS where the ACT works is shown in the icon label.

Extend options unlock only when any valid CS is selected.

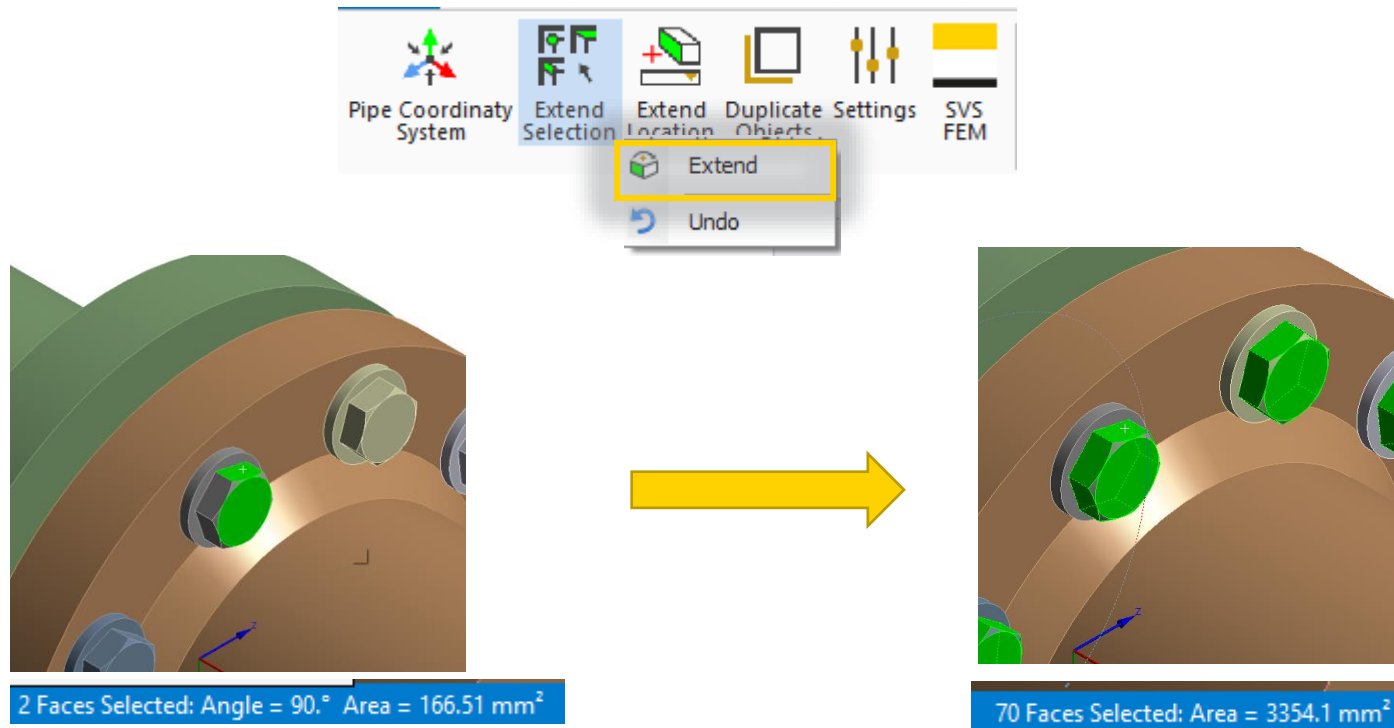

Controls

Extend Selection

Extends the selection in graphical window.

Action can be undone via Undo button.

Controls

Extend Location

Extends the location of the selected tree object.

To undo the action, select one of the objects of which location have been extended via this tool and click on *Undo* button.

Extend Undo

Mesh Face Meshing Named Selections

etails of "Face Meshing" - Mapped Face Meshing

Scope	
Scoping Method	Geometry Selection
Geometry	2 Faces
Definition	
Suppressed	No
Mapped Mesh	Yes
Constrain Boundary	No

Mesh Face Meshing Named Selections

etails of "Face Meshing" - Mapped Face Meshing

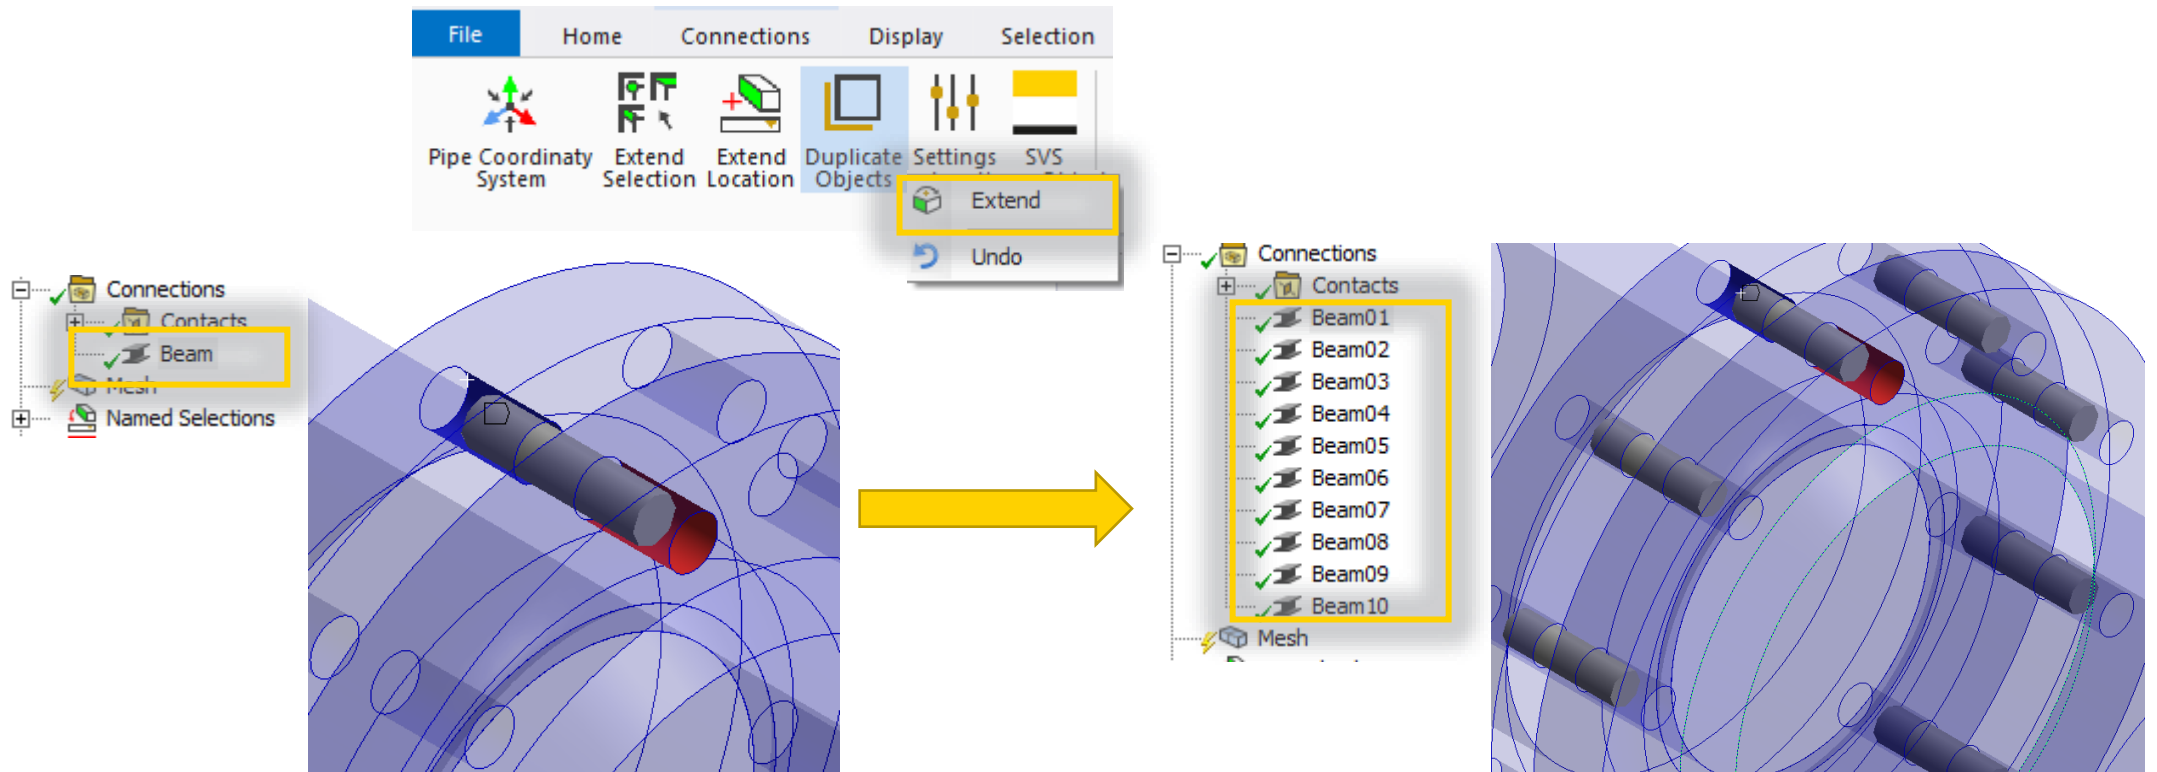

Scope	
Scoping Method	Geometry Selection
Geometry	70 Faces
Definition	
Suppressed	No
Mapped Mesh	Yes
Constrain Boundary	No

Controls

□ Duplicate objects

Duplicates selected tree objects, with respect to geometry selection.

To undo the action, select one of the objects, which have been created via duplicate function of this tool and click on *Undo* button.

Controls

Settings

Modify the settings to affect the results of the extension. The file must be saved to impact the extend function.

If the tolerance value is large enough the parameter will be ignored.

Check examples on following slides.

```
[Extension Settings]
# Size parameters
Volume Tolerance (m3)      = 1e-9
Area Tolerance (m2)       = 1e-5
Length Tolerance (m)      = 1e-3

# Location parameters
Axial Location Tolerance (m) = 1e-3
Radial Location Tolerance (m) = 1e9
Pinball Radius (m)        = 1e

# Other parameters
Body Name Filter          = Yes           # Yes/No
```

Controls

Settings – Size parameters

Tight Area Tolerance

```
[Extension Settings]
# Size parameters
Volume Tolerance (m3) = 1e-9
Area Tolerance (m2) = 1e-6
Length Tolerance (m) = 1e-3
```

The area of faces differs reasonable

Benevolent Area Tolerance

```
[Extension Settings]
# Size parameters
Volume Tolerance (m3) = 1e-9
Area Tolerance (m2) = 1
Length Tolerance (m) = 1e-3
```

Controls

Settings – Location parameters – Radial tolerance

Benevolent Radial Tolerance

```
# Location parameters  
Axial Location Tolerance (m) = 1e-3  
Radial Location Tolerance (m) = 1  
Pinball Radius (m) = 1e-3
```

Tight Radial Tolerance

```
# Location parameters  
Axial Location Tolerance (m) = 1e-3  
Radial Location Tolerance (m) = 1e-6  
Pinball Radius (m) = 1e-3
```

Controls

Settings – Location parameters – Normal tolerance

Benevolent Normal Tolerance

```
# Location parameters  
Axial Location Tolerance (m) = 1  
Radial Location Tolerance (m) = 1  
Pinball Radius (m) = 1e-3
```

Tight Normal Tolerance

```
# Location parameters  
Axial Location Tolerance (m) = 1e-3  
Radial Location Tolerance (m) = 1  
Pinball Radius (m) = 1e-3
```

Controls

Settings – Location parameters – Pinball radius

Applicable only for *Duplicate Objects* affect which geom. entities on one body will be merged.

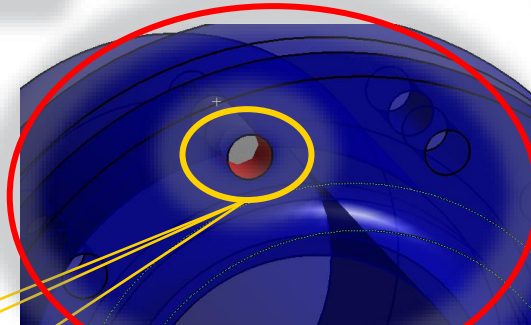

Tight Pinball

```
# Location parameters  
Axial Location Tolerance (m) = 1e-3  
Radial Location Tolerance (m) = 1  
Pinball Radius (m) = 1e-3
```

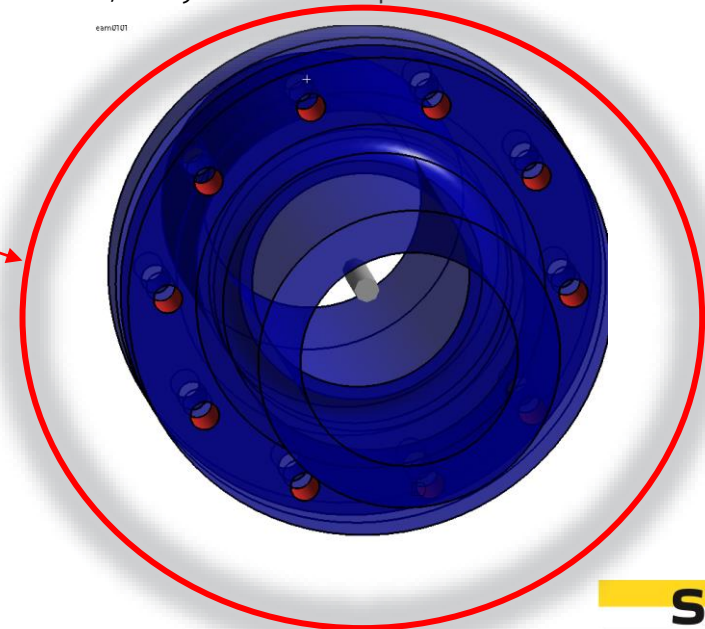

Benevolent Pinball

```
# Location parameters  
Axial Location Tolerance (m) = 1e-3  
Radial Location Tolerance (m) = 1e-2  
Pinball Radius (m) = 1
```

After Duplicate 3 objects with correct location created

After Duplicate no new object created, only location updated

Controls

Settings – Name filter

Name Filter ON

```
# Other parameters  
Body Name Filter = YES
```

Name Filter Off

```
# Other parameters  
Body Name Filter = NO
```
